NNIT and Informatica partner on ISO IDMP solutions for life sciences

Copenhagen, October 25, 2016 – NNIT, a leading provider of IT services and consultancy, has entered into an international partnership with Informatica®, the world's no. 1 provider of data management solutions.

The partnership enables NNIT to incorporate Informatica's extensive portfolio of data management solutions into its own offerings and will primarily focus on solutions to some of the most important regulatory challenges currently facing the life science industry.

"ISO IDMP - the international standard for identification of medicinal products to regulatory authorities - tends to be a business critical technical challenge for pharmaceutical companies," explains Morten Lindaa, Director of Life Science Solutions at NNIT. He continues:

"This partnership combines Informatica's leading data management software solutions with NNIT's IDMP experience. This enables us to offer the accelerated system configurations required for IDMP compliance. We have been working with Informatica on IDMP since January 2016 and their solutions complement our existing IDMP line of services perfectly, so we are happy to announce a formal partnership."

NNIT develops solutions for IDMP on top of Informatica's standard products so clients will benefit from a complete and comprehensive solution. Information Management is a critical element enabling pharmaceutical companies to integrate all data sources, manage master data and generate valuable insights.

Rodney Foreman, Senior Vice President, Partner Ecosystem, Informatica, notes: "Accurate and consistent data is essential to any business. By collaborating on IDMP, we combine Informatica's extensive portfolio of data management solutions with NNIT's outstanding regulatory expertise and legacy within IT services outsourcing for the life sciences industry."

Informatica's award-winning data technology is used by more than 7,000 enterprises around the world and comprises a complete portfolio of data management solutions including data integration, data quality, cloud integration, master data management, and data security.
