NNIT and QlikTech partner to squeeze more value from business data

A new partnership between NNIT and QlikTech makes it easier for private and public sector companies to get the maximum value out of their data. The partners are offering the QlikView Business Discovery platform in combination with NNIT's consulting, implementation and operations services. This means that customers spend less time on technology and can focus on squeezing more value from their data in an intuitive and simple way.

NNIT and QlikTech have signed an agreement on cooperation in the Danish market for business intelligence. The QlikView Business Discovery platform is already a great success in Denmark and its continued growth requires a partner like NNIT, whose 2,000 employees offer highly specialized advisory services, the implementation of QlikView and the subsequent operation and maintenance. This gives customers a complete solution optimised for their specific needs so that they can concentrate on realising value from a deeper insight into their business.

"We are proud to work with QlikView, which is undoubtedly the most successful 'light' business intelligence tool on the market. Companies see great opportunities in QlikView's business-oriented and intuitive design as individual departments and teams can explore their specific data with extraordinary ease. It is simple for users to define the analysis, work together online and reveal previously obscure correlations, which now can give a competitive edge. I am convinced that many customers will see QlikView as a valuable complement to their existing core ERP or business intelligence systems, such as SAP," says Søren Luplau Holt, CVP at NNIT."

QlikView has already been implemented by several Danish customers, but look forward to significant growth. This is what will drive the new partnership with NNIT.

"QlikView is all about creating value for our customers. And together with NNIT we will be better at what we do because our tools are complemented by NNIT's strong consulting services in a single package, enabling the customer to focus on their business. NNIT has a deep insight into the business systems, particularly SAP, from which QlikView retrieves data. This allows NNIT to ensure data quality and also deliver excellent operation of the solution," says Morten Fanø, Country Manager, QlikTech Denmark.

Both public and private sector companies are showing increasing interest in better exploitation of their data. The new partnership gives them a flexible and intuitive solution that can be implemented relatively quickly and with much less cost than traditional business intelligence systems.
