NNIT announces partnership with Dell Boomi

NNIT, a leading provider of IT services and consultancy strengthens its position in cloud system integration in Denmark by entering into a new partnership with Dell Boomi.

The partnership with Dell Boomi means that NNIT expands its portfolio of services to also include iPaaS; a tool for system integration in the cloud.

As more and more organizations move parts of their system portfolio from own data centers to data centers and services in the cloud, the need for solutions and consultancy on how to integrate the systems in the cloud increases.

iPaaS (Integration-Platform-As-A-Service) is an integration tool, developed in the cloud and used to integrate cloud-based products with other cloud products and integrate software in local data centers. The systems contain many standard integrations why the integration only requires a minimum of changes to be connected in the cloud.

Boomi is unique, since development and monitoring is done in the cloud, whereas execution and data storage can be placed either in a physical data center behind one's own firewall or in the cloud via for example Microsoft Azure Cloud.

"Dell Boomi's development of new functionality ensures them a leading position, and their products are among the best in the market. This partnership therefore comes natural to NNIT," says Mikkel Iversen, Director of Integration & Development in NNIT.

"Our experienced integration consultants will be certified in iPaaS from Dell Boomi, and be ready to implement," he explains.

"We look forward to a productive partnership that will further strengthen NNIT's position in IT services and consultancy on cloud system integration," says Nordic Manager Thomas Østergaard-Geisler, Dell Boomi. "With Dell Boomi's cloud-based integration platform, NNIT's clients will be able to solve even their most complex integration challenges and experience the advantages of the cloud."

NNIT already provides development, maintenance and advisory services on integration products from SAP, Microsoft, EPIC and Informatica.
