NNIT positioned as a Major Contender for Life Sciences Digital Services

New analysis of leading digital service providers puts NNIT in a solid position on the life sciences map.

Copenhagen, September 12, 2018 - The internationally acknowledged consulting and research firm Everest Group recently positioned NNIT as a Major Contender in the digital service provider landscape for life sciences companies.

This position is described in a new report, which helps life sciences companies select their digitalization partners: “Life Sciences Digital in Europe – Service Provider Landscape with Services [PEAK Matrix™](#) Assessment 2018”.

As the focus on the patient increases and with a growing demand for individualized treatments and integrated care, pharmaceutical companies now need to develop digital strategies along the entire value chain. The companies need to find credible partners who can help them make use of new technology such as artificial intelligence, automation and blockchain.

“These new technologies drive digital transformation into areas such as Research & Development and Production, both of which continue as core business areas for NNIT,” explains Brian Troelsen, Business Development Director, NNIT. He continues:

“Leading pharmaceutical companies through a digital transformation requires skill, experience and a profound understanding of its intricacies. The position assigned to us by Everest Group, is a testimony to NNIT’s IT expertise within the global life sciences industry.”

During the past two decades NNIT has grown out of the pharmaceutical industry to establish itself as a highly regarded IT service provider with the scale and capabilities to support life sciences companies on a global basis.

Everest Group’s PEAK Matrix assessment adopts an unbiased and fact-based approach, highlighting and positioning only the best-in-class service providers within Life Sciences Digital. Making it through the assessment and being represented on the [PEAK Matrix](#) is itself a favorable recognition.

NNIT has approximately 3,000 employees and 400 clients in Europe, USA and Asia (June 2018).
